

Logic Simulation System Guide

- Left click a button or an item to use it
- Use the scroll wheel to change the zoom level
- Hold right click or use the move tool to move the camera's position
- Left click when holding an object to place it into the build area
- Click an input and an output to create a wire between them
- Right click a placed object to bring up additional information
- Colours and settings can be changed on the Options menu
- Press escape to return to the mouse tool or to close all windows

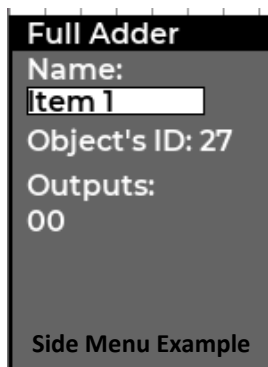

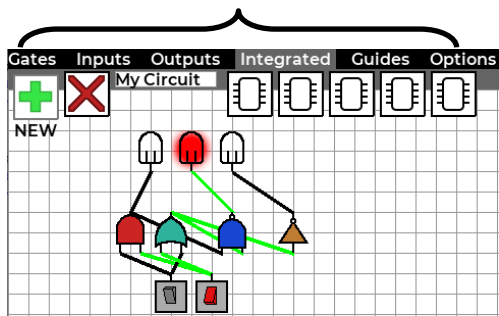

Loading and Saving Circuits

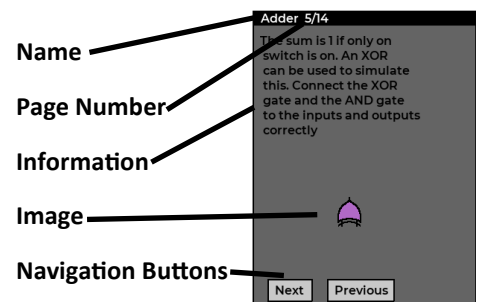

- Left click a saved file to open that project
- Right click a saved file to delete that project
- Click the save button to save, if the file is new then it will prompt you to name the file.

Integrated Circuits

Guides

To compile a circuit into an integrated circuit for later use, name all switches and LED's using the side menu. Then navigate to the Integrated menu name the system and then click new. This will add your new integrated circuit to the menu (it will save when the program is closed).
